Week 3 Quiz

 Quiz 1

Quiz section

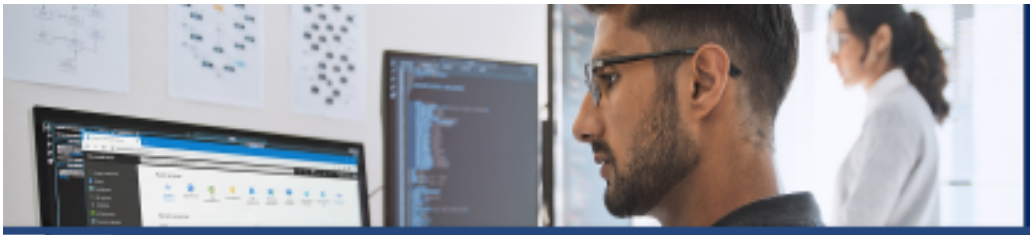

Q1. Structured data can be organized into tables with rows and columns. (Multiple choice)	1 / 1	
Q2. I have several image files, Excel files and video files. Which service should I use to store this data? (Multiple choice)	1 / 1	
Q3. Fabric is a SaaS platform where data is stored in a centralized open format in OneLake. Is this statement true or false? (Multiple choice)	1 / 1	
Q4. Which SQL clause is used to perform a group-by operation on a table? (Multiple choice)	1 / 1	
Q5. You want to store files (e.g., CSV, text, and other formats) and make them accessible to various Fabric services. Which item should you create in your Fabric workspace? (Multiple choice)	1 / 1	
Q6. To select all columns from the table "MyTable," which SQL statement should be used? (Multiple choice)	1 / 1	
Q7. We've designed an ETL pipeline in Azure Data Factory. Can we schedule the pipeline to run daily? (Multiple choice)	1 / 1	
Q8. When working with Data Flow in Azure Data Factory, what is the term for the location from which we source data? (Multiple choice)	1 / 1	
Q9. What can be accomplished at an enterprise level within Azure Databricks? (Multiple choice)	1 / 1	
Q10. Azure Event Hubs is capturing a real-time data stream. We need to transform this data stream and store the processed data in an Azure SQL database. Which service should we use? (Multiple choice)	1 / 1	
Q11.To set up a Stream Analytics job topology, which three elements should we define? (Multiple choice)	1 / 1	
Q12. Which query language does Azure Stream Analytics use? (Multiple choice)	1 / 1	
Q13. Can we load data from a Parquet file stored in Azure Data Lake Gen2 Storage into a DataFrame in Spark Pools? (Multiple choice)	1 / 1	
Q14. Data flows in Azure Data Factory allow us to perform data transformations without writing code. (Multiple choice)	1 / 1	
Q15. Event Hubs are organized inside namespace. (Multiple choice)	1 / 1

Week 6 Quiz

Quiz 2

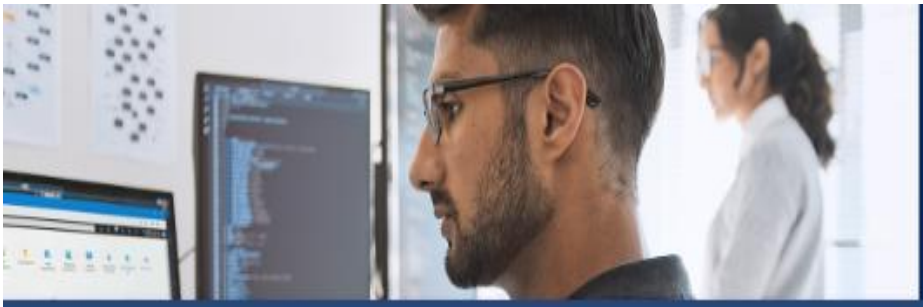

Quiz section

Q1. How can we delete a table named "MyTable" using SQL? (Multiple choice)	1 / 1	
Q2. Which SQL clause is used to perform window operations on a table? (Multiple choice)	1 / 1	
Q3. You want to process data stored in a Lakehouse using Spark with Python code, and also execute some SQL code within the same environment. What item should you create in your Fabric workspace? (Multiple choice)	1 / 1	
Q4. You have a CSV file stored in Fabric's Lakehouse, and you want to query it using SQL without importing the data into the warehouse. What should you do? (Multiple choice)	1 / 1	
Q5. What should we create to inform Azure Data Factory how to connect to other services, such as Azure Data Lake Gen2 Storage? (Multiple choice)	1 / 1	
Q6. When tables are created in Azure Databricks, they are stored in Delta format by default. (Multiple choice)	1 / 1	
Q7. To run SQL queries inside a cell in an Azure Databricks notebook, which magic command should be used at the beginning of the cell? (Multiple choice)	1 / 1	
Q8. We need to process a real-time data stream at scale. Which service should we use to capture the streaming data? (Multiple choice)	1 / 1	
Q9. The Online Data Generator can be used to send events to Event Hubs and is an excellent tool for testing Event Hubs. (Multiple choice)	1 / 1	
Q10. We want to stream diagnostic logs from Azure Data Lake Gen2 storage to an Event Hub. What steps should we take? (Multiple choice)	1 / 1	
Q11.We want to process streaming data using Stream Analytics jobs within specific time windows. Which functions can be used to accomplish this? (Multiple choice)	1 / 1	
Q12. Which service should we use to process data in parallel and in-memory? (Multiple choice)	1 / 1	
Q13. Data stored as key-value pairs in JSON files is an example of: (Multiple choice)	1 / 1	
Q14. What is the default storage format for Microsoft Fabric? (Multiple choice)	1 / 1	
Q15. Tables in the Fabric Data Warehouse can be linked using a drag-and-drop interface, making it easier to create relational models for Power BI dashboards. (Multiple choice)	1 / 1

Project Assessment

Outline how Azure services are used to perform complex ETL (Extract-Transform-Load) processes

Criteria	Weight
Azure Blob Storage	5
Azure SQL Database or Azure Dedicated SQL Pool	5
Azure Data Factory	15
Azure Event Hub and Azure Stream Analytics Job	35
Implementation Summary	10

Calculated Total: 70 / 70
